The ChainLUBE Advantage

The Dual Nozzle System Electrostatically Applies Lubricant to Only the Vital Areas of the Chain

The Charged Lubrication is Sprayed Directly Where it can lubricate the Wear Surfaces of a Chain

Lubrication is Precisely Applied Where Standard Methods Can't

Chain LUBE

Standard Lubrication

Precise lubrication of critical internal parts

Critical parts are dry and prone to wear

Electrostatic Chain Lubricator

The ChainLUBE is an advanced electrostatic chain lubricator system that can be installed to new or existing environments. It can be added to almost any chain system and is ideal for base coater and decorator pin ovens, or any other chain application where uniform chain lubrication is necessary. This is achieved by positively charging the lubrication material and precisely applying it to the grounded or negatively charged chain. The twin nozzle arrangement provides uniform lubrication distribution to the most difficult to reach and critical internal chain components.

Included Equipment

- High efficiency pump
- 16 Liter lubrication storage tank
- Twin electrostatically charging nozzles
- Standard Installation Package includes all cabling, piping and mounting
- Control panel with programmable feature
- Independent electronic pin / chain counter
- Optional integrated chain lube stand

Features & Benefits

- Extended chain life
- Precise lubrication of critical internal chain components
- Operates and installs independently of line or equipment controls
- System programmable for spray duration, lube amount and cycle time
- Suited for a variety of compatible lubes including food grade applications
- A clean and effective system prevents oil slung into or onto cans
- Small footprint for ease of install
- Improved/easier housekeeping
