Efficient Inline Single  
Head, Double Seamer

4 Head CO2 Evacuation

4 Head Fill Station

Empty Can  
Rinse Station

## Standard Features

- Small footprint rinses, fills and seams at 35cpm
- CO2 evacuation and filling heads
- Automated single head, double seamer
- Designed for the small to medium sized Microbrew / Craftbrew industries

## MicroFILL™ Benefits

- Compact design allows for quick size change and easy cleaning
- Stainless Steel construction for long life
- Cost effective for small operations
- Simple HMI controls and user friendly operation engineered for the Microbrew environment

## MicroFILL™ Overview

Integrated Packaging Solutions (IPS) MicroFILL was designed specifically to support the small to medium sized Microbrew / Craft-brew industry. It has been successfully adopted by the craft beer industry and other slow speed fillers of various beverages. The MicroFILL can rinse, seam and fill a 12oz or similar size can at 35cpm.

Each stage of the MicroFILL is constructed from stainless steel and corrosion resistant materials for long life and easy cleaning. The prefill rinse station removes any minor debris from the depalletizing process allowing for a pure product. The filling station's CO2 evacuation/filling heads precisely fill your product into quality aluminum cans. Lastly, the inline automated single head, double seamer completely seams your crafted product for later customer enjoyment.

Optional equipment can include a dissolved oxygen meter (off-line) or an inline post-fill rinsing station that reuses the empty can rinsing station water in a conservation effort.

MicroFILL is a cost effective solution for small to medium Craftbrew companies to present their product in a sustainable container.
