# V2 Spray System™

# Features & Benefits

## Standard Features

- Uses VertiSPRAY's easy adjust gun mounts
- Digital readout for accurate gun adjustment
- Easily adjustable vent hood
- Reduced IC Nozzle cleaning
- Cyclonic over-spray collection system
- Adapter plates for standard IC spray machines

## V2™ Benefits

- Quicker spray setups
- More up-time due to cleaner nozzles
- System creates an overall cleaner machine
- Reduced machine maintenance requirements
- Emission & IC solids collected at machine level
- Quantifiable gun orientation, ideal BPA free coating

# V2 Spray System™

## V2™ Overview

The V2, precision IC spray retro-fit kit is another innovative product from VERTICON, LLC. This highly engineered IC spray retrofit kit provides some of the revolutionary design features of the VertiSPRAY that can be adapted to your existing spray machines.

Similar to the VertiSPRAY, the V2 system includes a precise gun mount with a quick adjust feature and precision over-spray capture technology. This patent pending technology results in a projected reduction carbon footprint, minimizing fumes and solids to be inhaled by the user.

V2's digital readout gun adjustment system has the gun/nozzle precision ideal for exact spraying of BPA free coatings. The accuracy of V2's gun repositioning is .005" (.130mm).

This design improves the standard IC spray machine by creating a cleaner machine environment which translates to less downtime. If maintenance is required the V2 has features like a simple swing arm that rotates the entire gun mounting system away from the machine. Simply put, the V2 system can turn any common IC spray machine into an efficient clean operating machine.
