## **MatCONVERSION, Washer Oven & IBO Synthetic Mat Conversion**

IPS is offering **MatCONVERSION** Services on Internal Bake Ovens (IBO); changing *stainless steel* to *synthetic*. If not properly maintained, stainless steel is more apt to corrosion and wear. By changing to synthetic mats, you will experience a reduction in *Energy Costs*. IPS can provide Energy Saving details upon request.

### ■ **Energy Saving Opportunities:**

1. Moving a Stainless Steel Mat requires a larger motor and more electricity. It takes less energy to move a Synthetic Mat.
2. Reheating a Stainless Steel Mat every time it leaves and returns to the oven is an extremely high waste of energy.

### ■ **MatCONVERSION Features:**

1. New Infeed Stand
  - Fife Tracking Unit
2. New Exit Stands
  - New Drive Motor
  - New Mat Take Up
3. All New Perforated Slide Beds
4. Integrated Controls that work with your existing Oven Panel
